

EQUIPMENT GUIDE

S50 Suspended Installation

Suspending an S50 in three steps

Choose a Suspension Kit

Order your choice of Metallic Black or Carrara White Suspension Kits. These kits come with a modified stove lid (required to connect supports) in a matching finish. Also included are the mandatory 1ft segment suspension support w/black cover, 20ft of cable, a ceiling mounting bracket, and a ceiling finishing cover.

Choose quantity of Suspension Supports

You can suspend an S50 a maximum of 14ft from the top of the stove to the ceiling. The initial kit includes a required 1ft support, after which you can order additional 1ft and/or 2ft supports as needed to achieve your desired distance. These "suspension supports" are modular and include a 10" diameter "flue cover" in black.

Example: Hanging a black S50 7ft from the ceiling would require an S50 Metallic Black Suspension Kit (that includes a 1ft support), and three 2ft Segment Suspension Supports.

Begin Installation

Ensure you have order the correct amount of Suspension Supports you will need and follow the installation procedure included with the S50 Suspension Kit.
